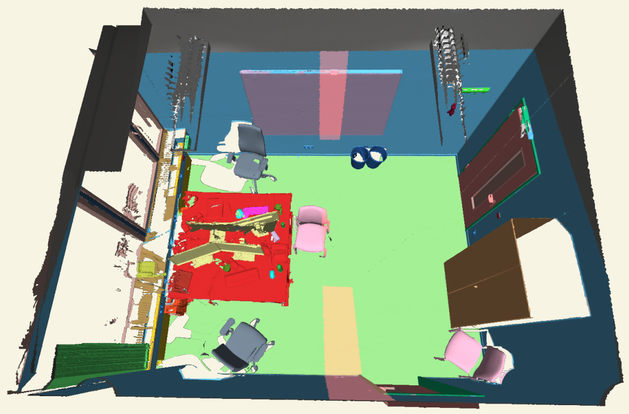
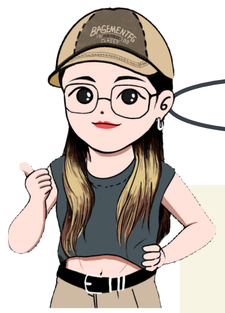
3D Semantic/Instance/Panoptic segmentation



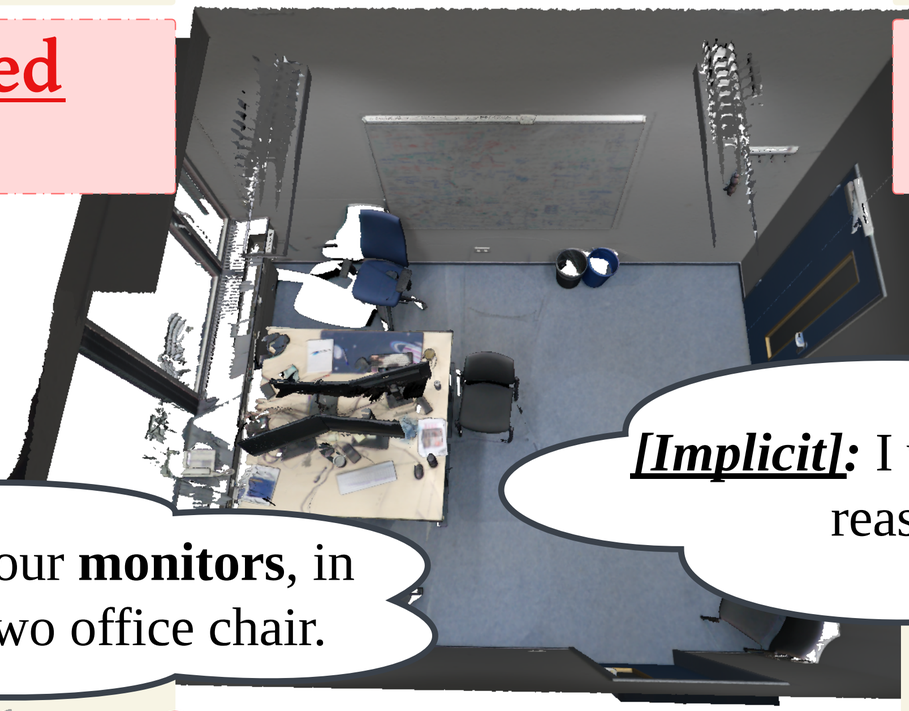
only <u>prededined</u> categories

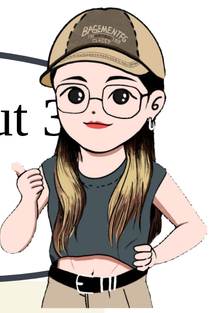
3D Open-vocabulary segmentation



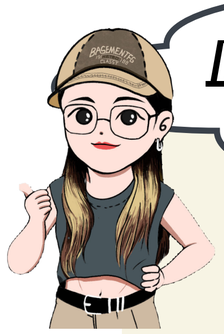
"sit" , "monitor"

Why <u>limited</u> language input?





[Implicit]: I wanna read some papers about 3 reasoning segmentaion online.



[Explicit]: There are four **monitors**, in front which are two office chair.

The model isn't very helpful. I don't know everything in detail.

3D Referring segmentation

Sure, this is <SEG>. You can use the monitor and seat in the office chair infront of it.

You are very helpful. Thanks for your explaination.
